

The Board of Commissioners office released the following road related information:

COMMISSIONERS' WEEKLY REPORT

October 25, 2002

GIVE 'EM A BRAKE

The need for Road and Utility workers to do their work on the roadways of the County continues through out the year. With the shorter daylight hours and other conditions that reduce visibility it is important that all drivers be alert and react appropriately to maintenance and repair activity that requires people and equipment to be on the roadway. If you come upon a work zone reduce your speed, observe the signs and follow the instructions provided by the Traffic Control Flaggers when they are present. The few extra minutes added to your trip is a worthwhile investment in your safety and the safety of those working to make the roads and utility systems better for your use.
